What were the Fund costs for last year? (based on a hypothetical \$10,000 investment)

Class Name	Cost of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Institutional shares	\$77	0.70%

How did the Fund perform last year and what affected its performance?

The Fund's Institutional Shares returned 20.62% for the trailing twelve months ended July 31, 2024, lagging the S&P 500 Index (the "benchmark"), which returned 22.15%.

Equities generally experienced strong positive returns over the period, boosted by falling inflation, resilient economic data, and expectations for lower interest rates. Mega-capitalization and growth stocks outperformed, with swelling enthusiasm around artificial intelligence (AI) driving particularly strong results for large technology stocks.

Much of the Fund's underperformance relative to the benchmark was attributable to several large benchmark holdings that do not currently meet Domini's environmental and social standards and are therefore ineligible for investment, including Meta Platforms, Eli Lilly, General Electric, and JPMorgan Chase. These impacts were partially offset by contributions from the Fund's overweight to Information Technology and lack of exposure to Energy, which the Fund does not invest in due to Domini's exclusionary standards on fossil fuels. The top individual contributor was an overweight position in technology company NVIDIA.
