## What were the Fund costs for last year? (based on a hypothetical \$10,000 investment)

| Class Name           | Cost of a \$10,000 investment | Costs paid as a percentage of a \$10,000 investment |
|----------------------|-------------------------------|---|
| Institutional shares | \$122                         | 1.15%   |

## How did the Fund perform last year and what affected its performance?

The Fund’s Institutional Shares returned 11.75% for the trailing twelve months ended July 31, 2024, outperforming the MSCI EAFE Net Total Return Index (the “benchmark”), which returned 11.21%.

Equities generally experienced strong positive returns over the period, boosted by falling inflation, resilient economic data, and expectations for lower interest rates. Mega-capitalization and growth stocks outperformed, with swelling enthusiasm around artificial intelligence (AI) driving particularly strong results for large technology stocks.

Sector allocations and stock selection both contributed to outperformance relative to the benchmark. The positive sector allocation impact was largely attributable to the Fund’s overweight to Information Technology and underweight to Consumer Staples. Positive security selection was driven by outperformance in Health Care and Materials, partially offset by underperformance in Financials. The top individual contributor was an overweight position in Danish pharmaceutical company Novo Nordisk, which has experienced blockbuster sales for its weight-loss and diabetes medications.
